Subject: Biomarker assays

Dear Robin,
after I read Kirk's last bioanalytical update I was happy but I did not see the methyl- and ethyl-adenine on the list of to develop assays. As we did see such great difference betweeen smokers and no-smokers in the E 4 study I would highly appreciate if we could ask MDS for a proposal. After we receive from Scherer the full data set we can then make the final decision to move forward.
Best regards
Hans
